Art Unit: 1742

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-9, 11-16 and 18-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Griffin et al. '447.

Griffin et al. '447 discloses a method of making a cutter (see figures 3 and 4 for engagement) comprising :

providing a first substrate (19);

providing a second substrate (20);

providing a polycrystalline/catalyst component (21); and

bonding the first and second substrate to the polycrystalline/catalyst component under high temperature and pressure (col. 6, lines 43-51).

Griffin et al. '447 further discloses wherein the catalyst comprises cobalt (col. 7, lines 6-9).

Griffin et al. '447 further discloses wherein the cutter is engaged on a third substrate (28).

Griffin et al. '447 further discloses wherein the first substrate is in annular form.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1742

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 10 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Griffin et al. '447.

Griffin et al. '447 discloses the invention substantially as claimed (see paragraph 2 above). However, Griffin et al. '447 do not disclose wherein the first substrate is grooved.

It is common knowledge in the same field of endeavor to groove a surface of a substrate cutter in the same field of endeavor for the purpose of improving the bonding between a substrate and a diamond/binder component.

It would have been obvious to one having ordinary skill in the art at the time of the invention to groove the substrate (19) in the invention of Griffin et al. '447 in order to improve the bond to the diamond/binder component.

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1742

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-10 and 18-22 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 and 18-22 of copending Application No. 10/064,428. Although the conflicting claims are not identical, they are not patentably distinct from each other because both go the method of forming the multi-substrate cutter, the language to notches reading on the surrounding structure of the second substrate.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
